DETAILED ACTION

Allowable Subject Matter

Claims 1-18 are allowed. The following is an examiner's statement of reasons for allowance: With respect to claims 1, 3, and 17, the Prior Art does not teach wherein a current estimating means are received from detected dc current inputs from a power converter, which the converter turns into ac power for the motor; d-axis and q-axis current controlling means so that estimated currents approach current instruction. With respect to claims 5, the Prior Art does not teach wherein an axial error operating means produces a first phase error from the difference between rotational phase instruction and phase of ac motor; and a subtracting means for producing a second phase error from the difference between a position detection signal and rotational phase instruction; and a combining means for producing a third phase error from the sum of first and second phase errors. With respect to claims 14, the Prior Art does not teach wherein an axial error operating means produces a first phase error from the difference between rotational phase instruction and phase of ac motor; and a subtracting means for producing a second phase error from the difference between a position detection signal and rotational phase instruction.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
